

No.	Description	Mark Allocation
Part 1: MongoDB / Data / API		
<i>This is the only technical aspect of the marking, so just ensure that you tick all these boxes.</i>		
a	Pulling data from MongoDB	1
b	Using the "mongodb" package	1
c	Data already entered (2 users, 2 posts, 1 album, and 1 user with a friend.	1
d	No dummy data in components (everything should pull from database)	1
e	ExpressJS is used for your API routes	1
f	Folder structure is correct (/backend and /frontend)	1
Part 2: Linking the Frontend and Backend		
<i>For this section, we want to see that you have implemented your API routes into your frontend. You can do the backend how you want, as long as it is using ExpressJS. How you actually do the requests is up to you, so we are going to look exclusively at the frontend functionality (via the browser) to see changes rather than looking at the code behind it.</i>		
g	No errors in browser console	1
h	Native Fetch API being used	1
i	Authentication API Request (Login, Signup, Logout)	3
j	Profile API Request (View, Edit, View other profiles, Delete your profile)	4
k	Friend / Unfriend API Request	2
l	Post (Create a post, edit a post, delete a post	3
m	Album (Create an album, edit an album, delete an album	3
n	View albums, view posts, comment on posts, report posts	4
o	Admins can edit/delete all activity, posts, user accounts, add new reasons for reported posts	2
p	Activity Feeds (show correct information for "local" and "global" feeds)	2
Part 3: Basic TailwindCSS Styling		
q	No default Tailwind fonts	1
r	No default HTML fonts	1
s	Implemented colours across entire website	2
t	Implemented theme (fonts / general layout) across entire website	2
Part 4: Questions		
<i>Two random questions that we will ask on the day, just like how we have been doing it in the practicals.</i>		
u	On the day question 1	2
v	On the day question 2	2
Total		41
